

LSV 28 Extended Neck Grinder

Where others don't reach

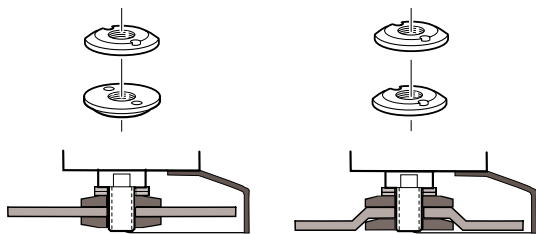

Atlas Copco

LSV 28 extended neck grinder – slimmer and with better reach

The new LSV 28 extended neck is the latest product in the 28-series of small grinders. An excellent choice whatever your grinding application. It covers the range where others don't reach, from rough grinding of welds and cleaning of castings to fine surface preparation and polishing – with a slimmer profile and a better reach.

Wheel flanges are included for depressed-centre wheels and cutting-off wheels

Compared to other tools of similar size, the new 28-series gives you at least 30% better power-to-weight ratio, plus greater comfort and better control over your grinding process.

High power – low weight

With no increase in size or weight, the power-to-weight ratio of the 28-series is far superior to most other models on the market. The efficient new motor delivers higher productivity with no increase in air consumption.

LSV 28 extended neck

- high power-to-weight
- low angle head
- speed governor for optimum power
- rear exhaust, piped away
- soft grip, insulated handle
- wheel flanges, included for grinding and cutting 9.5 and 16 mm holes
